

I have operated on 160 meters for the last 7 years. During this time I have run into many situations where stations running SSB low in the band have made it almost impossible to carry on a CW QSO, especially if weak signals are involved. Thankfully, this isn't a problem on the other HF bands and I believe that it is time for this band to have a similar structure.

In my opinion this is a very good idea that is long overdue. I strongly support RM-10352.
